Art Unit: 1755

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-12 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. Subject matter critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). There is no teaching in the instant application, as filed, to direct one of ordinary skill in the art to select those compounds that would be expected to bind the required dye component, prevent diffusion of the dye or increase water resistance, without undue experimentation. The disclosure fails to identify the composition of "MS-50", "MS-55" or "MS-80". There is no teaching directing one of ordinary skill in the art to select compounds having functional groups falling within the scope of "F" of the instant claims, without undue experimentation. There is no teaching directing one of ordinary skill in the art to select those groups that would function as the "hydrophobic group" within the scope of the instant claims, without undue experimentation. Only three specific compounds or classes of compounds are "identified" in the original specification and these examples "MS-50", "MS-55" and "MS-80", which are not further defined. While applicant does identify the desired functions of the first and second binding agents, merely reciting a desired result does not overcome the failure to identify which compounds exhibit the desired results. *In re Corkill*, 226 USPQ 1005.

Claims 3-7, 9 and 10 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 1755

The terms "TES", "MS-50", "MS-55" and "MS-80" are not defined. The recitation of claim 4 is impossible to construe as the base claim requires that the dye bind to the MS-50 component. Claim 7 is indefinite as reciting a "saline binder" without antecedent basis. It has been construed as "silane binder".

The prior art of record fails to teach the combination a an antireflective layer disposed on the outer surface of a CRT faceplate containing an organic dye, a first specific binding agent that is able to bind the organic dye preventing diffusion of the dye and, a second specific binding agent that provides increased water resistance for preventing washing out of the dye.
